8. Main Content

The aim of the draft order is to amend the Order of 24 December 2001 relating to digital terrestrial television establishing the characteristics of the signals emitted. It expands the use of MPEG-4 video coding and enables the use of standards for broadcasting and DVR-TB and HEVC coding for services that will be broadcast on new multiplexes and for services in ultra-high definition. Moreover, it completes the provisions currently in force, specifying the audio coding standards used for services broadcast in high definition and the standard used for interactive services (HbbTV). Finally, it removes some obsolete provisions (specification of the image ratio of the video, teletext service coding standard) and updates identifiers of certain normative documents.

9. Brief Statement of Grounds

The draft order comes in response to extensive consultation of the parties involved in digital terrestrial television. It has two aims: enable the release of the '700 MHz' frequency band for mobile electronic communication services, thanks to a more effective use of the radio-electric spectrum via expansion of the use of MPEG-4 video coding as from 5 April 2016; and modernise the digital terrestrial television platform, notably thanks to the introduction of new standards governing the broadcasting and DVB-T2 and HEVC video coding.
