8. Main Content

A. This document covers the minimum mandatory requirements of digital transmitters and receivers for use on private radio link systems in the 1400 mhz fixed services frequency band. Due to the small amount of spectrum currently released in the UK, usage is restricted to systems having a maximum transmission rate of 2 mbit/s. All equipments shall conform to the minimum requirements detailed in this specification.

This document is designed to implement etsi de/tm-04014 equipment as follows: type b and c operating with a maximum bit rate of 2 mbit/s at up to 1 mhz channel spacings.

B. The United Kingdom would like to be informed by other member states of their own standards or regulations offering an equivalent level of safety and security.

9. Brief Statement of Grounds

There is an urgent need in the UK to define requirements to allow implementation of spectrum plans to accommodate new services, to allow for migration of fixed services equipment, as soon as possible to this new band from the 1500 mhz band now allocated to broadcasting.

This document will mirror the essential parameters of etsi draft specification de/tm-04014 which is now a stable draft heading for public enquiry.

10. Reference Documents - Basic Texts

mpt 1417 draft 2.2 of october 1994

11. Invocation of the Emergency Procedure

No
