4. Notification Number

1999/0363/E

5. Title

Draft decree approving the technical standard for common telecommunications infrastructures in buildings for the reception, adaptation and distribution of signals for radio broadcasting, television and associated information services originating in terrestrial and satellite transmission.

6. Products Concerned

Concerns the installation of systems for the reception, adaptation and distribution of signals for radio broadcasting, television and associated information services originating in terrestrial stations and via satellite in buildings.

7. Notification Under Another Act

Directive 98/48/EC

8. Main Content

This decree concerns the common telecommunications infrastructure aimed at enabling signals to be received, adapted and distributed for radio broadcasting, television and other associated information services originating in terrestrial and satellite transmissions, through the technical equipment necessary to enable different homes or premises of a building to be connected to the distribution networks. The technical specifications which will facilitate this access will be determined in accordance with the annex to this decree.

The conditions setting out the obligations and responsibilities of subscribers to the service, residents' associations or landlords and the government are established.

The technical projects shall be implemented and monitored by competent qualified telecommunications engineers and set up by qualified installation engineers.

The annex to the decree defines and specifies the different elements of the aforementioned infrastructure, the technical specifications which it must fulfil and the minimum safety requirements.

9. Brief Statement of Grounds

It may be noted that the reasons which have led to the drawing-up of the present decree for access to the telecommunications service aimed at enabling signals to be received, adapted and distributed for radio broadcasting, television and other associated information services originating in terrestrial and satellite transmission are the regulation of the service, the reduced visual impact of antennae, greater ease of installation due to a specific infrastructure for telecommunications, greater facility in receiving the aforementioned service under the best possible conditions, and the development of legal conditions which allow citizens rapid access to new information technology.

10. Reference Documents - Basic Texts

- Royal Decree 2652/1982 of 24 September.
- Royal Decree-Law 1/1998 of 27 February on common infrastructures inside buildings for access to telecommunications services.
- General telecommunications Law 11/1998 of 24 April.
- Royal Decree 2169/1998 of 9 October approving the national technical plan for terrestrial digital television.
