4. Notification Number

2006/0251/UK – C50A

5. Title

The Natural Mineral Water, Spring Water and Bottled Drinking Water (Scotland) Regulations 2006

6. Products Concerned

Natural mineral water, spring water and bottled drinking water

7. Notification Under Another Act

-

8. Main Content

These draft UK Regulations consolidate the requirements laid down in the existing Regulations, which implement Directives 80/777/EEC (as amended) and 98/83/EC (as amended), the latter as it relates to bottled water for human consumption. Schedule 8 of these draft Regulations contains a requirement that spring waters and bottled waters which have been softened or desalinated must not have its hardness reduced below a certain level. In these draft Regulations the level is measured as 60 mg/litre of the calcium ion (the main component of water hardness). This requirement applies to all softened/desalinated spring waters and bottled drinking waters sold in the UK.

9. Brief Statement of Grounds

There is a significant body of epidemiological evidence that demonstrates an inverse relationship between drinking water hardness and the incidence of cardiovascular disease (CVD). The UK has one of the highest rates of cardiovascular disease mortality in Europe and in 2004 CVD accounted for just over 216,000 deaths (British Heart Foundation, 2006), and was the second most commonly reported longstanding illness in Great Britain (ONS, 2005). Furthermore the popularity of bottled water with consumers is increasing as exemplified by the increase in total volume sales (+26.6 %) of spring water and bottled drinking water between 2001 and 2005. The protective effect of water hardness is therefore a beneficial health measure for the UK and it is therefore important to set this minimum hardness requirement.
