8. Main Content

Due to the increase in the number of unlawful flights over sensitive French sites by drones since autumn 2014, two members of the French Parliament tabled a draft law in spring 2016 on improving safety measures when using civilian drones. This draft was the result of the Government report to Parliament entitled 'The rise in civilian aerial drones in France: challenges and possible responses from the State', published in October 2015.

The law was finally adopted by the French Parliament and enacted on 24 October 2016 (Law No 2016-1428). It imposes new obligations on pilots, owners or manufacturers of civilian unmanned aerial vehicles. These are intended to prevent incidents posing a risk to State security, and make pilots accountable.

The Draft Order notified by France to the Member States and European Commission under Directive (EU) 2015/1535 aims to define the contents of the user manual to be provided with unmanned aerial vehicles and their main spare parts, pursuant to Article L425-1 of the Consumer Code. The manual shall include the same amount of information as the manual placed online by the French Directorate-General for Civil Aviation for recreational drones (see

<https://www.ecologique-solidaire.gouv.fr/sites/default/files/R%C3%A8gles%20d%27usage%20d%27un%20drone%20de%20loisir> using the manual published by the Directorate-General for Civil Aviation (DGAC) is an acceptable means of compliance with the requirement.

9. Brief Statement of Grounds

This Draft Order therefore aims to supplement, for reasons of guaranteeing public safety and State security, the French regulatory framework relating to unmanned aerial vehicles established by the Order of 17 December 2015 relating to the design of civilian unmanned aerial vehicles, the conditions for their use and the skills required of those using them and the Order of 17 December 2015 as amended on 30 March 2017 on the use of airspace by unmanned aerial vehicles.

The requirements contained in this Draft Order aim to define the contents of the user manual which shall accompany unmanned aerial vehicles and their main spare parts.

The aim is to ensure that purchasers of drones (new or second-hand) receive a minimum amount of information on the regulation concerning drones so that they act in a safe and respectful manner. The recommendations in the aforementioned report which have been included in the law are based on, in particular, the belief that greater compliance with the regulations by well-meaning users greatly decrease the number of false alarms and also facilitate the work of the services responsible for the prevention of attacks to the security and protection of sensitive sites.
