**5. Title**

mpt 1407 - performance specifications and frequency assignment criteria for: private fixed radio-relay equipment and antennas operating in the 7.425 ghz to 7.900 ghz frequency band

**6. Products Concerned**

radiocommunications equipment, fixed links.

**7. Notification Under Another Act**

-

**8. Main Content**

a. this specification covers the minimum mandatory requirements of fixed link digital transmitters and receivers for use on private radio link systems in the frequency bands 7.425 ghz to 7.900 ghz. these requirements include parameters necessary to ensure compatibility between channels from different sources of equipment on the same route, connected either to separate antennas, or to separate polarisations of the same antenna, and compatibility with the existing radio-relay network.

b. the united kingdom would like to be informed by other member states of their own standards or regulations offering an equivalent level of safety and security.

**9. Brief Statement of Grounds**

this is a regulatory document specifying the minimum equipment parameters necessary for frequency assignment in the uk. there is currently no work ongoing within etsi to standardise the use of this band, due to the diversity of use and equipment across europe. this regulation also contains parameters for stm-1 systems and the values use reflect those in prets 300 234.
