8. Main Content

The order lays down provisions with regard to preventing the spread of animal diseases that can be transmitted to animals or human beings via the transport of live animals. These provisions particularly involve the design of the means of transport and the containers, the transport scheduling and the transport itself, the access to loading or unloading sites, the separation of animals during transport, the cleaning and disinfecting after transport, the monitoring of the effectiveness of cleaning and disinfecting operations, the equipment to be kept on the means of transport, the tightening of prevention measures during transport in the event of an outbreak, staff training in biosecurity and the obligations for transporters to keep records.

9. Brief Statement of Grounds

France was affected by two large-scale epidemics of highly pathogenic avian influenza in 2015-2016 and then in 2016-2017. In the wake of these crises, it became apparent that transporting live birds represented a risk of spreading diseases that should be controlled. The order aims to improve biosecurity conditions during operations for transporting live birds.
